

makes a difference

VERSATILE. FLEXIBLE. EFFECTIVE.

Attachments for municipal implement carriers.

Get more out of your machines – all year round.

With 26 HP to 84 HP, Kärcher municipal machines offer outstanding performance for every application. They also impress with their perfect cleaning results, robustness and almost unlimited areas of applications. Special attachments are available to utilise the full potential of these implement carriers. Optimal solutions for a wide variety of applications. Specially developed for Kärcher implement carriers in conjunction with reputable attachment manufacturers. Leading expertise in technology and application combine for exemplary efficiency through optimal utilisation of the devices.

Perfect when it's done by a professional.

Wherever Kärcher municipal equipment is used, absolute professionalism is a must. With over 10 years of the most extensive experience in exterior cleaning, Kärcher is the most appropriate partner in this area. Not least because the best new solutions are developed in partnership with professionals in this sector. For municipal devices and accessories that are perfectly tailored to individual requirements: powerful, easy to use, robust, durable and efficient.

Always one step ahead

Manoeuvrability is good. High manoeuvrability is better. Extreme manoeuvrability thanks to articulated steering and 100% tracking stability is Kärcher. Because with Kärcher implement carriers with articulated steering, the rear part of the machine follows the front part accurately. Every kerb and every obstacle can be driven around without colliding, which makes these machines so flexible to use.

1 Three times the ease of use

The attachments on the MIC 50 are operated either via a joystick or via three hand levers. For even easier and more relaxed operation, an optional, ergonomically positioned arm rest is also available.

2 Advantage through configuration

The four-point mount is designed for medium-weight attachments. Changing attachments is even easier and faster with this mount.

3 Operation made easy

With the MIC 84, the attachments are operated using a joystick. Joystick control is also optionally available for the MIC 50. The switches for forward and reverse are integrated into the joystick. This means the driver can leave his hand on the joystick during operation. Here, too, an ergonomic arm rest makes the job more comfortable.

4 Ideal for heavy devices

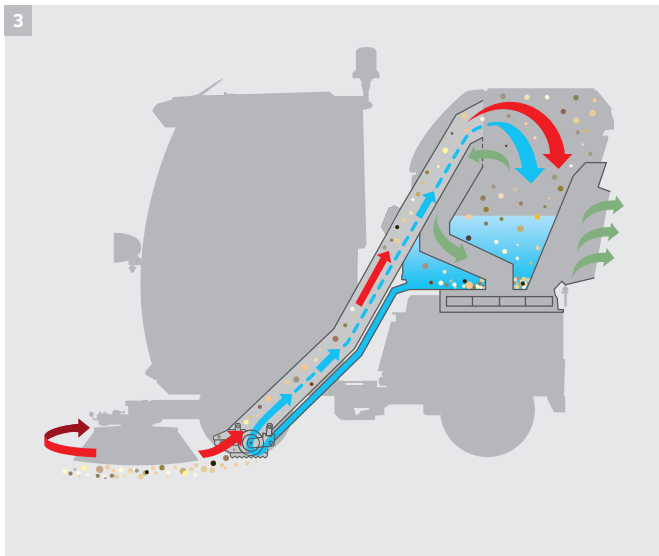

The three-point mount for heavy attachments, e.g. a snow clearer, comes as standard on the MIC 84 and is optionally available, with or without coupling triangle, on the MIC 50.

5 Good standard

A two-point mount comes as standard on the MC 50 and MIC 34 C.

Perfect for all surfaces.

Kärcher municipal sweepers deliver exceptional performance everywhere: on large areas, difficult surfaces, roads, paths, car parks, grassed surfaces and in winter. Each of these robust machines forms, together with attachments, an application-optimised solution in terms of power, operability and efficiency. And with it an investment that maintains its efficiency and value over years.

1 Sweep better with a third brush

With the third side brush, the actual sweeping width is extended from 1,400 to 2,000 mm. Sweeping under obstacles such as park benches is also made significantly easier, as is the sweeping of kerbs.

3 Unique suction system

A straight suction hose with 150 mm diameter in conjunction with a water circulation system and 500-l container are combined in this unique system. The suction mouth is protected in the wheel contour. The suction hose can be quickly removed if blockages occur.

2 Suction power in your hands

The 4.5-m-long manual suction hose (Ø 100 mm) aids in the vacuuming of light waste and is extremely flexible to use.

4 Everything up and out

With the hydraulic container lift over 145 cm, the content of the container (500 l) can be quickly and fully emptied directly into a container or onto a composting area.

1 Clean on a wide front

The front roller brush with 1,600 mm working width for sweeping of, for example, sand and dirt, but also for clearing snow up to a height of 100 mm. Can be pivoted left and right hydraulically.

3 Weed brush

The consistent solution against particularly stubborn weeds. Can be pivoted to both sides. The brush arm can be moved on the rail as required.

2 Weed brush with intake

For removing weeds at the roadside and vacuuming in one go. With two different hard bristles.

4 Even more useful sweeping width

Ultimate front roller brush with 2,000 mm working width, can be pivoted hydraulically on both sides. Also suitable for snow up to 100 mm in height.

Specialists for working with liquids.

Kärcher specialises in the area of wet cleaning. Here, the whole experience of the market leader comes to the fore, as does the close cooperation with professional suppliers. The result is a complete range with attachments for use with water: for cleaning surfaces such as sports grounds and roads, for spot cleaning with high pressure and watering trees and green areas.

1 Compact washing system

Designed for cleaning sports grounds and small parks. Optionally also suitable for spraying brine in winter service.

3 Medium washing system

With the spray bar adjustable up to 2.20 m, it is designed for cleaning roads and larger surfaces.

2 High-pressure cleaner and sweeper

Innovative device combination for cleaning machines and sweeping containers as well as for spot cleaning of corners and in small areas.

4 Big performance, maximum volume

The ultimate solution for washing roads and large surfaces.

1 Watering system with manual lance

Manual lance for individual watering of flowerbeds and borders in difficult-to-reach areas.

3 MIC 34 C with hydraulic watering arm

Optimal system for grassed areas in cities. The spray lances come with different attachments: sprinkler and pencil jet.

2 High-pressure cleaner with hose

Optimal for spot cleaning, for example of bus stops, waste containers, etc. Particularly effective in combination with the washing or watering system.

Sweeping, mowing, clearing. The whole year round.

Kärcher municipal machines can sweep more than just professionally. These implement carriers for year-round use are developed in close cooperation with drivers. This is an important basis for the extraordinary performance and efficiency of these machines in various sweeping conditions: from sweeping work to grass surfaces and winter service.

1 Mowing with container – unique system

Convert from sweeping to mowing with little expense. Simply exchange the sweeping system for the mower. The cuttings are suctioned in by the suction mouth and transported to the waste container. The waste container is used as a grass container.

3 Mowing with medium container

For large surfaces such as parks, also with side discharge.

2 Mowing with large container

Even more mowing width for faster work progress on large surfaces.

4 Combined rotary-mulching mower

Rotary mower with three-blade system, rear discharge and hydraulic cutting height adjustment.

1 Large flail mower

High performance through axial-piston hydraulic motor. As standard with cup blade for particularly clean cutting action. Also for high grass and uncontrolled growth.

3 Extended flail mower

For the removal of roadside greenery, the extended flail mower can be used on both sides up to 3.5 m.

2 Hedge shears - implement carrier on implement carrier

Different attachments can be mounted on the extension arm, including hedge shears, flail mower and pruning shears.

4 Compact flail mower

High performance thanks to an axial-piston hydraulic motor. Also for high grass and uncontrolled growth.

Ice-cold experts in combating snow and ice.

All of our municipal implement carriers have four-wheel drive. Specially for winter service and better traction on snow and ice, the MIC 45 and MIC 84 have automatic traction control. This allows them to utilise their full power safely. Together with the coordinated Kärcher attachment kits, it is an unbeatable combination.

1 Snow clearer - in combination with rear spreader

Snow clearer with a width of 100 cm, a hydraulically pivotable ejection chimney and hydraulically adjustable throw distance.

3 Semi-mounted spreader

Spreader with 600 l capacity, spreading function for amounts and spreading width and start/stop function. Stainless steel container. Two-chamber system for, for example, salt and grit, can be mixed and connected as required.

2 Silo filling

Semi-mounted spreader with the possibility of filling from a grit silo. This type of filling increases the fast operational capability.

4 Snow clearer - heavy version

Snow clearer with 1,600 mm working width for high and hard snow. Power is adjustable from 0-120 l/min. Chimney can be pivoted on both sides. Throw distance adjustable up to 25 metres.

1 Spreading systems

Either a disc spreader or a roller spreader can be operated on the MIC 34 C. The grit can be loaded onto the hydraulically activated loading platform and tipped into the roller spreader.

- Disc spreader: for larger areas
- Roller spreader: for pathways

3 Snow chains for optimal grip

Snow chains ensure better traction with narrow tyres. Here on an MIC 34 C with Vario shield (1.35 m), hydraulically tiltable loading platform and roller spreader with hydraulic drive and 1 m spreading width.

2 Chassis-mounted and trailer-mounted spreaders

Various spreaders, from simple trailer-mounted versions to chassis-mounted spreaders with path dependence complete the range of accessory equipment for winter service.

4 Snow plough

Whether clearing footpaths or removing snow on a car park – with the Vario snow plough, the driver can react individually and flexibly to snow volumes and the surroundings.

Solutions for every task.

Special tasks require special equipment. Together with specialised partners, Kärcher can provide the right attachment for almost every application. And if no solution is available from the large variety of standard devices, special developments are possible at any time.

1 Pallet handler – MIC 84

A shovel can be attached to the front-end loader instead of a pallet handler (load capacity, max. 1,000 kg). Up to 1,000 kg per shovel load.

3 Weed brush

Very robust brush for intense use in combating weeds on the roadside.

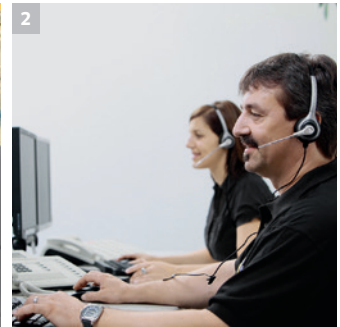

2 Trailer coupling

A trailer coupling makes the MIC 45 a versatile towing vehicle.

4 Front-end loader with shovel

The transport shovel is ideal for moving material such as stone, sand, bark mulch, etc. It can easily be mounted to or removed from the carrier vehicle in less than 10 minutes. Here a load of up to 650 kg per shovel load is possible.

Kärcher service – you can count on us.

We're there for you, wherever you need us.

Kärcher stands for top performance – not just in products, but also in service. As the world's largest manufacturer of cleaning machines, we are there for our customers all around the world and at more than 50,000 service and sales points. This is how we give you peace of mind. Kärcher – your reliable partner.

1 Planning

Kärcher also provides sound advice for your detailed project and property planning. We calculate exactly which resources you need and how you can configure your machines and equipment for optimal results.

2 Hotline*

Friendly. Competent. Solution-oriented. Kärcher hotline staff are familiar with all products, accessories and cleaning agents and can provide sound advice and assistance by telephone.

3 Service contracts

Consistently high performance: With our service contracts you can be assured that your Kärcher products will operate reliably at all times, thanks to regular inspection and maintenance or an all-inclusive full service package.

4 Application advice

We provide application advice to ensure that you always have the most efficient solution. Area, staff and schedule are the decisive factors in determining the products that best suit your needs.
