<sup>1)</sup> Through spot cleaning using the Kärcher steam cleaner, i.e. steaming for 30 seconds on the maximum steam setting in direct contact with the surface to be cleaned, 99.999% of enveloped viruses such as influenza viruses (except the hepatitis B virus) can be eliminated on most smooth, hard surfaces in the house (test germ: modified vaccinia Ankara virus). <sup>2)</sup> When cleaning at a cleaning speed of 30 cm/s using the maximum steam setting and with direct contact with the surface to be cleaned, 99.999% of all common household bacteria on common smooth, hard household surfaces are killed (test germs: Enterococcus hirae). <sup>3)</sup> Compared to the same device without a cartridge. Regular replacement of the descaling cartridge at the maintenance interval is essential. Minimum extension of product lifetime based on internal durability test with water hardness 20 °dH and carbonate hardness 15 °dH. <sup>4)</sup> The Kärcher steam vacuum cleaners can halve your cleaning time, since common household dirt can be removed from floors in a single step, doing away with the need to vacuum before mopping.

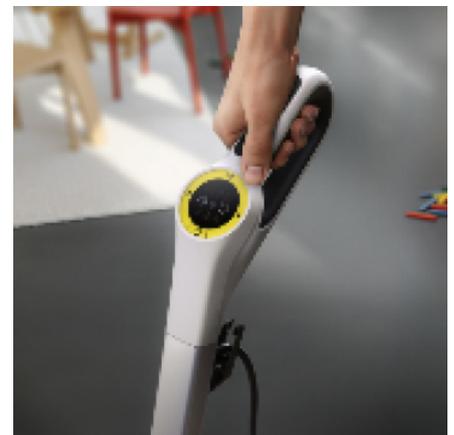

### 3-in-1 function

- Saves up to 50% time<sup>4)</sup> when cleaning, as the suction function eliminates the need for vacuuming beforehand. Deep cleaning is carried out using the steam function.
- Removes all types of dirt with 4 different cleaning modes - even larger and more stubborn dirt.

### Non-stop steam and integrated descaling cartridge

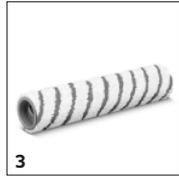

- The removable tank is easy to fill at any time - for continuous steam without interrupting your work.
- The intelligent descaling cartridge automatically removes limescale from the water, dramatically extending the service life of the device.

### Simple and user-friendly display

- Simple display for selecting the various steam modes and showing the device's most important features, such as heating up, cartridge replacement, full dirty water tank or empty fresh water tank.
