

KÄRCHER

EFFICIENCY. RELIABILITY. SERVICE.

PROFESSIONAL | CLEANING SERVICE PROVIDERS

SUCCESS THROUGH PARTNERSHIP

The trend towards the outsourcing of cleaning services by local authorities and companies continues. The prospects for cleaning service providers are therefore positive but they also face a number of challenges: dynamic competition, the pressures of rising costs as well as new activities and procedures in cleaning. Good performance alone is no longer a guarantee of success. Efficiency and sustainability are decisive success factors, as well as optimal management and a powerful, reliable partner – Kärcher, the world's market leader for cleaning technology.

JUST RIGHT FOR EVERY TYPE OF FLOOR COVERING

The floor coverings may vary but the task remains the same: perfect cleaning and care of all hard or resilient floor coverings. The Kärcher system has an optimal solution for the deep cleaning, maintenance cleaning and care of all types of floor covering. Dry or wet, cleaning by machine or with manual cleaning equipment, using tools and cleaning agents perfectly suited to the task. The results are as perfect in the centre area as they are around the edges. With all the possibilities and advantages that come from 80 years' experience as world leaders in cleaning technology.

Polishing machines

Scrubbers/scrubber driers

Vacuum cleaners

Mechanical, manual, individual
The prerequisites for efficient cleaning are different in almost every case. Depending on the type of floor covering, the area, the degree of soiling and whether it is an indoor or outdoor location, factors such as hygiene regulations, safety at work and environmental compatibility must be taken into account. More and more, the correct solution is a system that combines individual elements that are correctly matched.

The Kärcher system is a complete range of products and associated services from a single source, which can be combined to produce the best solution to practically any situation. And the deciding factor is not the range of elements available but the actual requirement. As your complete solution partner, Kärcher offers not everything it can, but everything that the system user needs.

EXTRACTING EVERY LAST SPECK OF DIRT FROM THE CARPET

Carpets in office buildings, hotels and schools are subject to heavy traffic every day. Kärcher carpet cleaners, vacuum cleaners and sweepers have been proving their worth for decades. These robust, powerful and versatile machines are designed for deep cleaning, intermediate cleaning and spot-cleaning carpets and for removing stains from textile surfaces. They also clean deep into the fibres of blinds, upholstery and car seats.

Dry vacuum cleaners

Carpet cleaners

Spray extraction cleaners and air blowers

1 Spray-Ex with strong suction

Spray extraction cleaners are ideal for cleaning all types of textile surfaces. Their robust technology, extra-powerful suction and comprehensive range of accessories allow outstanding cleaning performance and enormous versatility.

2 Interim carpet cleaning in record time

CarpetPro Cleaner iCapsol RM 760 Tablet is a spray extraction deep cleaner in tablet form. With encapsulation technology. In a practical foil that is water-soluble. No time-consuming rinsing.

3 Rugged construction

Daytime cleaning redesigned. The Kärcher ECO! T11 Bp Liner CartVac is a professional mobile cleaning solution designed with an integrated vacuum. Includes trash can.

4 Stain removal using steam

The compact SG 4/4 steam cleaner with powerful steam pressure of 4 bar. With continuously adjustable steam flow control and VapoHydro function for perfect cleaning results without the use of chemicals.

SANITARY AREAS - CLEANING DEEP INTO JOINTS AND CREVICES

Sanitary areas with non-slip coatings can be particularly demanding when it comes to cleaning. With limescale, skin grease and cosmetic residues found in baths, showers and changing rooms and with textured floors or small areas where hygiene requirements are high, the prevention of germ transmission in these areas is crucial. The regular use of compact, efficient Kärcher cleaning machines ensures that floors are hygienically clean, deep into joints and crevices.

For visible success, every day
Economy and hygiene are not mutually exclusive in cleaning, if it is approached systematically. Unsuitable cleaning agents or inadequate dosages will not achieve the required effect. Machines and manual devices that are too strong, too weak or not properly adjusted will cost more, even over the short term, than any apparent savings that they offer.

With the Kärcher system, the cleaning professionals go for success in every respect. For safe application and reliable performance. For top quality and well thought-out functionality. For reliable service and maximum efficiency and for everything that makes a difference: Kärcher.

Scrubbers/scrubber driers

Steam cleaners and multi-function devices

Cleaning agents

A RECIPE FOR CLEANLINESS

Hygiene is a ‘must’ in kitchens and restaurants. For compliance reasons as well, there must be no room for doubt that hygiene is the top priority here. In these sensitive areas, the Kärcher system offers everything for professional cleaning in the context of strict adherence to hygiene regulations. A comprehensive range of powerful cleaning machines, accessories and cleaning agents is available for such purposes, so that everything from stainless steel surfaces to tiles and floors can be kept hygienically clean.

Wet and dry vacuum cleaners

Scrubber driers

Scrubbers and single-disc machines

Steam cleaners

Compact solutions for demanding environments

The SG 4/4 steam cleaner with VapoHydro cleans entirely without the use of chemicals and is therefore ideal for the food industry*. Its 2-tank system and refined refill technology allows long periods of non-stop cleaning. VapoHydro allows precise adjustment of steam pressure and of steam saturation (steam or hot water jet). Even the most stubborn dirt doesn't stand a chance against the high temperatures and pressure of the SG 4/4.

The mobile, compact scrubber driers are ideal for deep and maintenance cleaning of all hard surfaces in small kitchens and restaurants. These machines include long-proven technologies as well as some of the most innovative solutions, such as KART – Kärcher Advanced Response Technology – allowing them to be steered like a car.

PROFESSIONALS REQUIRE PROFESSIONALS – RIGHT ALONG THE CHAIN

When industry enters into a contract with a cleaning service provider, they both need the right partner. A system provider who can offer everything and make everything possible. With machines for standard and specialist applications. Reliable technology that can deliver ultra-high performance when required, in order to remove stubborn dirt. Even under extreme operating conditions, and in action around the clock. Machines and accessories that are ergonomically constructed, easy to maintain and highly mobile. Embedded in a network that is flexible enough to cover everything.

Dry ice blasters

Industrial vacuum cleaners

High-pressure cleaners

Everything that industry needs

Mobile and stationary high-pressure cleaning are essential applications in industry, be it the meat processing, automotive or chemicals sector. Often cleaning with water and steam is not an option, perhaps because of the risk of corrosion in the case of casting moulds, or because of the need to avoid leaving behind residues. It is in these situations that the powerful Kärcher dry ice blasting devices are deployed, to gently clean surfaces using dry ice pellets as the abrasive medium.

Industrial Vacuums

With our Kärcher industrial vacuum cleaners and dust extractors, we offer you solutions for every industrial vacuuming task: whether flexible and mobile or stationary, for vacuuming anything from coarse swarf to the smallest suspended particles, for small or large quantities, for liquids or solids, for unproblematic or hazardous material.

UNBEATABLY VERSATILE

As the inventor of the high-pressure cleaner, Kärcher offers a range of high-pressure cleaning products that leaves nothing to be desired in terms of technical refinement and scope of application – be it cold water or hot water units, powered by electric motor or petrol/diesel engine, mobile or stationary. With the same technological, quality and efficiency demands, Kärcher’s sweepers and vacuum sweepers have proved themselves in exterior cleaning on various surfaces and types of ground. Always the best machine for every requirement.

Compact walk-behind sweepers

Gum Remover

High-pressure cleaners

Cleaning agents

Configured for surface cleaning.

The Jarvis series is a complete solution for quick, streak-free cleaning of businesses’ entrances, parking lots, tennis courts, pool decks and sidewalks. This easy to use cold water surface cleaner pressure washer is an all-in-one unit with the pump and engine attached to the surface cleaner, and it is designed to attack the superficial dirt sweeping alone does not get. The Jarvis series surface cleaner pressure washer is perfect for all operators - simple on / off operation, flat free tires and a folding handle for easy transport and storage.

Remove gum with ease.

Over one billion dollars in gum is sold every year. Some of that gum is bound to end up stuck to your flooring and outdoor surfaces. Traditional methods of removing gum are time consuming at best and at worst they are ineffective. The SG3 Bp Gum Remover safely and easily removes gum from hard and soft floors in a matter of seconds. Our unique technology quickly vaporizes gum through a combination of heat and our green, environmentally safe detergent. This means you can have a facility with no more unsightly black marks on your floors! Feel safe knowing that this model runs completely on its lithium-ion battery—no explosive or flammable products are used.

SUSTAINABILITY IS MORE THAN ENVIRONMENTAL PROTECTION.

Sustainability means conducting business fairly, with a sense of responsibility towards people and the environment. For Kärcher, sustainability is a firmly anchored corporate goal, practised for decades: a sound financial situation and appropriate earnings achieved in fair dealings with others, along with the responsible use of resources.

BLUECOMPETENCE

Alliance Member

Partner of the Engineering Industry Sustainability Initiative

Less is more. And less can do more

The primary aim of Kärcher eco!efficiency is to reduce the consumption of resources and energy with a cleaning performance that is tailored to specific applications. In order to calculate the possible savings in energy and CO₂ emissions over the service life of the machine and render them comparable, these were calculated based on the example of our T 12/1 and T 12/1 eco!efficiency dry vacuum cleaners. TÜV SÜD Industrie Service GmbH verified and confirmed the plausibility of the methodology for calculating greenhouse gas emissions in the utilisation phase of the T 12/1 eco!efficiency against benchmarks. Based on this methodology, Kärcher calculated that all T 12/1 eco!efficiency dry vacuum cleaners sold to date will save around 6,000 tonnes of CO₂ emissions throughout their service life. All Kärcher eco!efficiency machines in total will save about 2.5 million tonnes of CO₂ emissions.

Working for a better world: BlueCompetence

Blue is the colour of sustainability, which takes into account cost-efficiency, environment and society. The “BlueCompetence” initiative, supported by the Verband Deutscher Maschinen- und Anlagenbau e.V. (VDMA), includes about 400 companies and organisations with one common goal: to ensure quality of life on our planet for years to come.

Do more with less energy

The CO₂ emissions savings of all machines are equivalent to about 1.5 million flights from London to New York*. These figures clearly demonstrate how much energy and emissions can be saved by using Kärcher eco!efficiency cleaning appliances. When it comes to climate protection, less is always more – and achieves more.

* 1.7 tonnes of CO₂ per flight.

Climate-neutral cleaning

We cannot produce anything without emissions. But we can completely offset greenhouse gas (CO₂) emissions in order to neutralise their effects on the environment. And you can also do this for your industry. For a small surcharge, you can offset the CO₂ emissions of your Kärcher cleaning appliances so that they are climate-neutral over their entire operating life.

These contributions, yours and ours, are used to fund a certified climate protection project by ClimatePartner: for example, “water treatment in West Kenya” gives millions of people access to clean drinking water. Through the use of filter systems for water treatment, 2.1 million tonnes of CO₂ are saved annually in the form of firewood. At the same time, sustainable jobs for several thousand people are created. A project that is useful for everyone, completely transparent and accountable. Your sales advisor can explain how you can benefit from climate-neutral cleaning.

makes a difference
