

KÄRCHER

**UNIQUE. VERSATILE.
INNOVATIVE.**

PROFESSIONAL | RETAIL

CLEANLINESS DOESN'T JUST HAPPEN. IT COMES FROM US.

We provide retailers with everything they need to ensure their supermarkets and businesses are clean and run smoothly. With our cleaning solutions in the Kärcher System, you receive everything from a single source: rugged, easy-to-operate machines and innovative technologies. This gives you optimal results, every time, everywhere – outdoors and inside the store, in production and in the logistics area. Economical and safe.

You want more than perfect cleaning results. We've got your back, offering professional service and financing concepts. Let's venture into the future of cleaning together. With Connected Cleaning, we simplify the planning, control and documentation of your cleaning processes. This gives you a previously unknown level of transparency over processes and results. We customise and adapt these solutions to your individual needs. The objective is always that your customers feel good.

SYSTEM MEANS THAT EVERYTHING RUNS THE WAY IT’S SUP- POSED TO

As a retailer, you want to surprise and delight your customers time and again and acquire new customers. There are many ways of doing this, such as new store concepts to create a contemporary atmosphere. However, modern store construction materials often pose new challenges for cleaning. At the same time, cleanliness is tremendously important to the perception your customers have. In any case, the solution for you is called the Kärcher System.

The Kärcher System includes a fine-tuned, application-specific set of cleaning machines, accessories and cleaning agents, in conjunction with forward-looking services. This equips you professionally for every area and every requirement and lets you make use of the performance capability of your machines. We draw upon our expert knowledge gained from over 75 years of experience in every area of cleaning to find the optimal solutions.

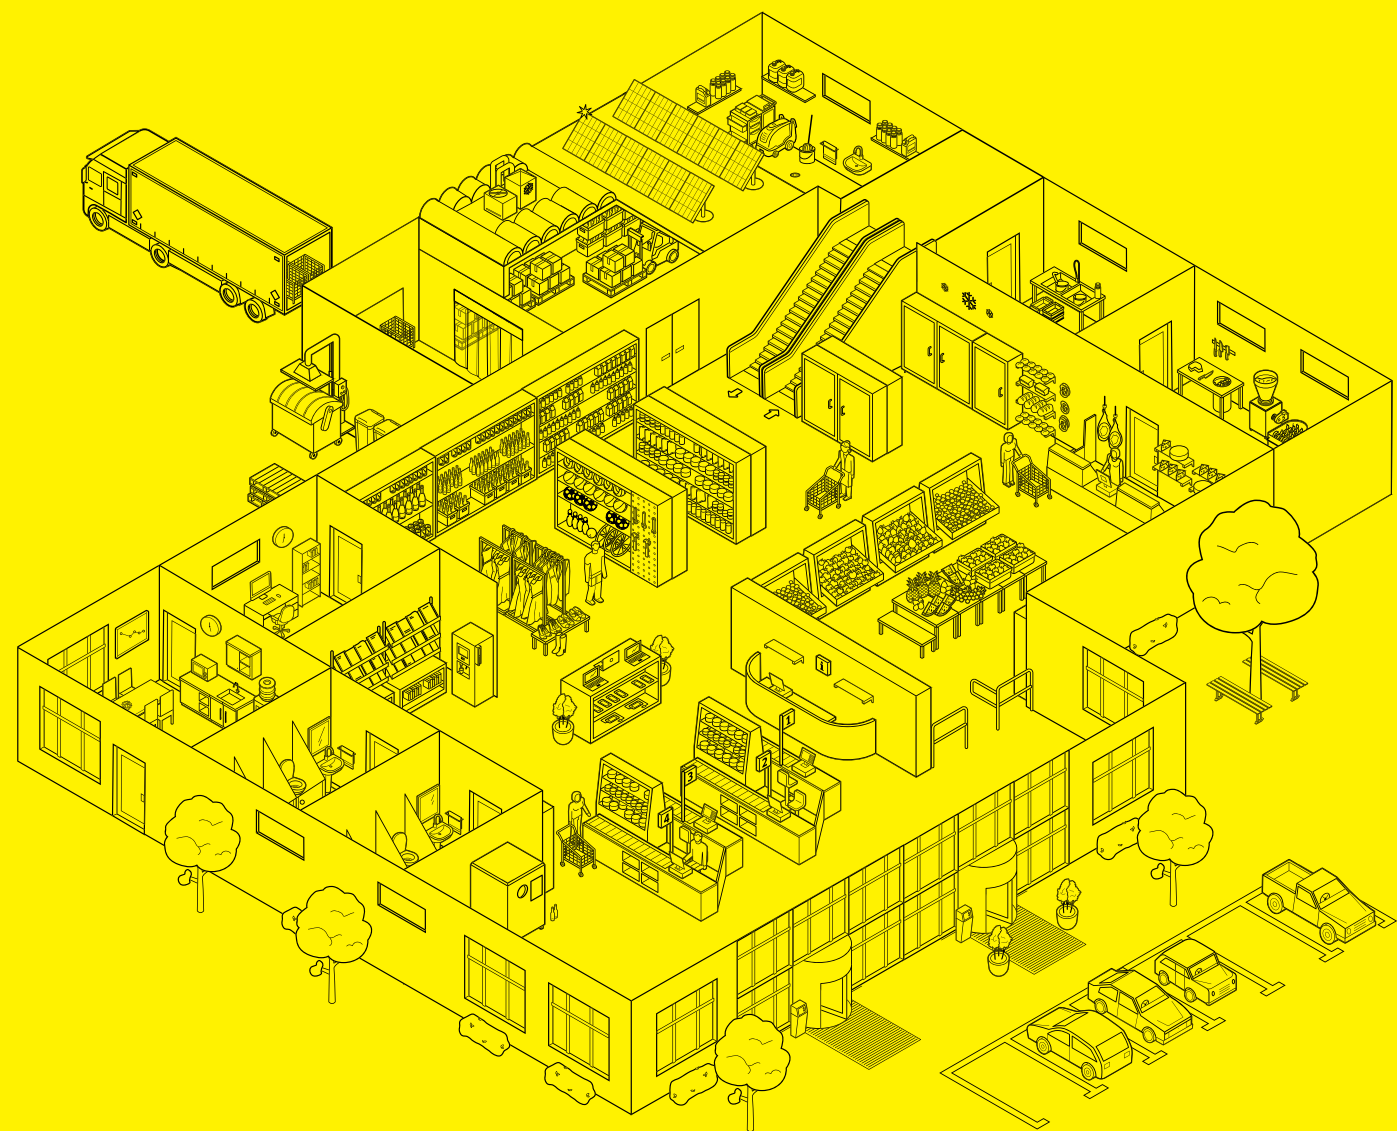

Our solutions are functional, efficient, environmentally friendly and feature a more than persuasive price/performance ratio. For example, we give you the tools you need to fulfil even the most stringent hygiene requirements without specially trained cleaning personnel.

As the world market leader in cleaning systems, we can support your international locations thanks to our international subsidiaries. This enables you to benefit from the Kärcher System and its tremendous cost-effectiveness. In planning and everyday operation, you always have the right partner for cleaning—a crucial aspect of business. And you have the peace of mind to concentrate on your core tasks.

As a system supplier, Kärcher does not want to offer anything and everything, only what operators need for their individual cleaning system. Decisions are made based on the actual needs of the customer and not based on what products are available. We give you a system that consists of machines, accessories, cleaning agents, services and digital solutions that can be easily integrated into operating procedures and adds value. A system that makes a difference. The Kärcher System.

TOP-NOTCH MACHINES ARE NEEDED EVERYWHERE

Floor cleaning: Our machines give you perfect results for deep cleaning, maintenance cleaning or intermediate cleaning. Our scrubber driers, vacuum cleaners and manual machines clean efficiently and are improving all the time through continuous innovation. Your customers will be thrilled by the sparkling clean floors and stay longer in the store without even being conscious of it.

Washroom cleaning: Our powerful steam vacuum cleaners and, where necessary, suitable cleaning agents are the perfect combination for cleaning sanitary facilities. This enables you to offer your customers clean washrooms and toilets as they expect to find them.

Textile and carpet cleaning: For maintenance and fibre-deep cleaning, you can depend on our patented cleaning methods. They let you remove stains effortlessly and extend the life of your textiles and carpets.

Surface cleaning: The Kärcher System gives you the right solution for each surface, from the office to the fresh food area. Clean with low pressure, high pressure or manually. Using the correct cleaning agent for each application. This is systematic, quick and easy on the material.

Exterior cleaning and maintenance of green areas: We have the right solution for every task, from daily sweeping of the entrance area to maintenance of green areas. With our sweepers and implement carriers, you reduce the amount of dirt carried into the store by up to 80 per cent. In doing so, the costs for exterior cleaning are only a fraction of your savings on interior cleaning.

Mobile and stationary high-pressure cleaning: With our high-pressure cleaners, you easily and reliably meet the stringent hygiene standards in production. At the same time, you safeguard the service life of the equipment and furnishings and ensure product quality.

Glass cleaning: Our window cleaners make it easy for you to clean without streaks. Without any paper towels at all. This saves you time and money and provides long-term protection of the environment.

Distribution centres and logistics: Large surfaces, clinging dirt, a lot of dust and, in many cases, coarse dirt. Here, you need strong and robust machines. This includes interior cleaning of lorries and incoming goods areas with the familiar cleaning problems.

Special cleaning: Innovative Kärcher technology lets you master even difficult cleaning tasks without any problems. We have solutions including everything from solar cell to escalator cleaning. These give you maximum earnings and less downtime.

EVERY FLOOR CAN BE THIS CLEAN

Innovation on every level. You will be amazed at the new possibilities available to you in the area of floor cleaning alone.

The pace of innovation is increasing all the time. Today, our product range for floor cleaning gives you everything you need for efficient floor cleaning with perfect results: the Kärcher System for deep, maintenance or intermediate cleaning.

To ensure that your customers will feel good with every step they take in your business and want to stay longer, we give you system solutions for floor cleaning that allow you to deal with any dirt, no matter how stubborn: scrubber driers, dry vacuum cleaners, wet and dry vacuum cleaners and manual machines. In conjunction with application-specific accessories and cleaning agents, you have powerful dirt-removing action that is gentle on the floor.

Simple is good. Very simple is the best.

Whatever the area of the surfaces to be cleaned, time is precious and the result has to be perfect. Finding the ideal combination of machine, accessories and cleaning agent is a science in its own right. This has been our job for as long as we can remember. You can always depend on us to provide the best solution for you. For any application and any budget.

Daily cleaning – economical cleaning

Even with modern, efficient cleaning machines, manual cleaning remains a common practice in daily maintenance cleaning. Surfaces can be quickly and affordably cleaned by hand in places that machines cannot reach.

THE RIGHT PRODUCT FOR EVERY APPLICATION

For your business to have a professional appearance, you need clean and well-maintained floors. Our professional cleaning machines ensure that your floors are always hygienically clean and remain so for a long time.

Technology that serves everybody
A wide variety of different floor coverings, often in combination, the spatial conditions, tight time windows, members of the public walking by and many different types of dirt present complex requirements. However, this is no reason to worry. We provide you with the right solution for deep and maintenance cleaning on any floor in the form of machines with disc or roller brushes. The roller technology, with its 8-x higher contact pressure, attains the best results for heavy dirt on structured floors (with joints) and for polishing. Pre-sweep units relieve you of the need for a separate sweep pass before the wet cleaning. Smooth and delicate floors, such as linoleum or fine stone flooring, are a chance for machines with disc brush technology to demonstrate their advantages. The floor is cleaned gently and wear on it is minimised.

Brush head with disc engineering	Brush head with roller technology
<ul style="list-style-type: none">■ Particularly for unstructured floor coverings■ Ideal for delicate floors■ Low level of brush wear■ Particularly quiet running	<ul style="list-style-type: none">■ Particularly for structured floor coverings■ High contact pressure■ For heavily soiled surfaces■ Sweeping function■ Self-cleaning rollers■ Good corner cleaning

Get the best results
You need a system to get perfect results. Our Kärcher System combines powerful cleaning machines with suitable accessories and a fine-tuned selection of cleaning agents to create your custom solution for optimal cleaning results.

- Adaptation of the brush hardness (colour-coded from light = soft to dark = hard).
- Special melamine/microfibre pads for gentle cleaning of difficult surfaces such as fine stone, etc.
- Gentle, effective cleaning agents for spotless cleanliness and brilliant shine.

Our experts would be glad to give you individualised advice at any time. We work together to find the most effective and economical solution for you.

CAN BE CLEANED INSTEAD OF REPLACED

The objective in cleaning textiles and carpets is to clean them and maintain their value. With our patented cleaning methods for maintenance and fibre-deep cleaning, you attain this goal over the long term.

Our CarpetPro Line lets you clean and maintain textile surfaces in a gentle and effective manner. This innovative system reduces cleaning and drying times and delays resoiling, protecting treated surfaces as well as the environment and your budget. CarpetPro Line is based on iCapsol technology, which encapsulates and binds the dirt. Rinsing carpets is no longer required, as the encapsulated residual contamination is simply vacuumed up during subsequent maintenance cleaning. Carpets dry quickly and are ready to walk on in no time.

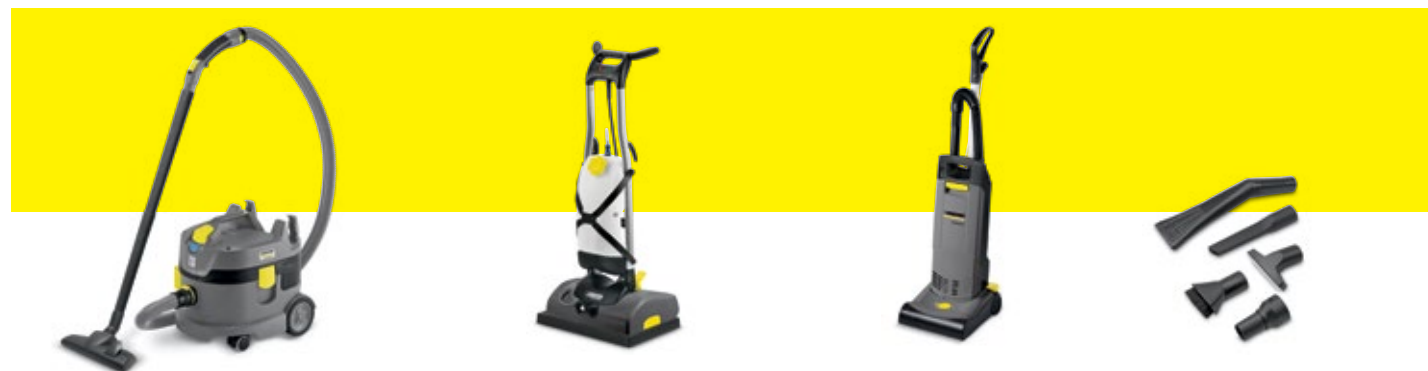

Phosphate-free recipes

Kärcher assumes responsibility for people and the environment. Our cleaning agents demonstrate that powerful cleaning is also possible without using harmful ingredients like phosphates.

Integrated odour absorber

An integrated odour absorber cuts the time needed for intermediate and deep cleaning of textile surfaces. Carpets and upholstery are not only left clean, but also smell clean.

COMPLY WITH HACCP*. ALWAYS.

Performance is the decisive factor. Where hygiene comes first, the cleaning performance has to be exceptional. Whether cold water or hot water high pressure, steam or suction power – Our solutions set the standard in critical environments as well. Application-specific equipment with an outstanding price/performance ratio and sustainable in all respects.

Hygiene is in the interest of everyone's health and must be maintained without compromise. In our view, HACCP is not just an abbreviation. It represents responsibility to people. Because we know that you act with the same level of responsibility in ensuring hygiene, we provide cleaning solutions with HACCP compliance. This gives you the assurance that you are fulfilling all legal requirements. Today and going forward.

For thorough wet cleaning, you are ideally equipped with our HACCP-compliant hygienic high-pressure cleaners in stainless steel: hot water resistant up to 85°C, all water-carrying parts made of food-grade special brass, 2 cleaning agent tanks with rinsing function. Enjoy more relaxed work with our patented EASY!Force high-pressure gun that uses the recoil of the high-pressure jet to reduce the holding force to nil. With the injector suction action, the cleaning agent is always metered with precision.

Get clean faster

Who knew cleaning surfaces could be this simple? Using a high-pressure cleaner, our foam lance and the right cleaning agent, for example, you can foam, spray down and disinfect the entire production area. When you use our surface cleaner, you can reduce the cleaning time by up to 30 per cent. In accordance with the Venturi principle, the dirty water is suctioned during cleaning and can be routed directly into a drain or tank. No spraying, no drawing off of the standing water, no slipping hazard. Just perfect cleanliness, faster.

* HACCP stands for Hazard Analysis Critical Control Points – these control points are at every stage of preparation, processing, manufacturing, packaging, storage, transport, distribution, handling and sales of foodstuffs.

CLEANLINESS IN GREEN AREAS

Cleaning is important. It's even better to catch the dirt before it enters the building. We will show you how.

The cleaning tasks in the outside area are at least as varying and demanding as interior ones. Lawns must be mown, parking areas and paths swept and entrance areas vacuumed. This does include winter service, snow removal, autumn leaves and other events that cause dirt.

Dirt should stay outside
Studies have shown that 94 per cent of dirt is brought into buildings by people walking into the building. Systematic cleaning in the outside area reduces the amount of dirt brought into the building by as much as 80 per cent. This means that any investment you make in a good sweeping routine in the entry and outside areas is money well spent. Use our small yet powerful tools, such as the electric broom and push sweepers, for cleaning in and around the entry area. We developed our carpet vacuum cleaner specifically for the intermediate cleaning of anti-dirt mats.

Think as far ahead as possible!

Chewing gum problem? All gone!
Chewing gum waste in front of the entry area is all too common. You used to have to go to the trouble of scraping it away manually. Now you doesn't have to. Our new SG3 chewing gum remover removes all chewing gum from any floor surface – in just three to five seconds. Thanks to the SG3, you are highly mobile and completely independent.

You may think you've got your entryway secured. Expand your cleaning measures all the way to the borders of your plot of land. Sweep paths and parking spaces with push or ride-on sweepers. Our ride-on sweepers are extremely agile and robust while consuming little energy. The right accessories even make them suitable for large areas.

THIS IS WHAT WELL-MAINTAINED LOGISTICS LOOKS LIKE

In logistics, it's not just goods turnover that has a whole other dimension. Cleaning tasks also accumulate as surfaces and structures are added.

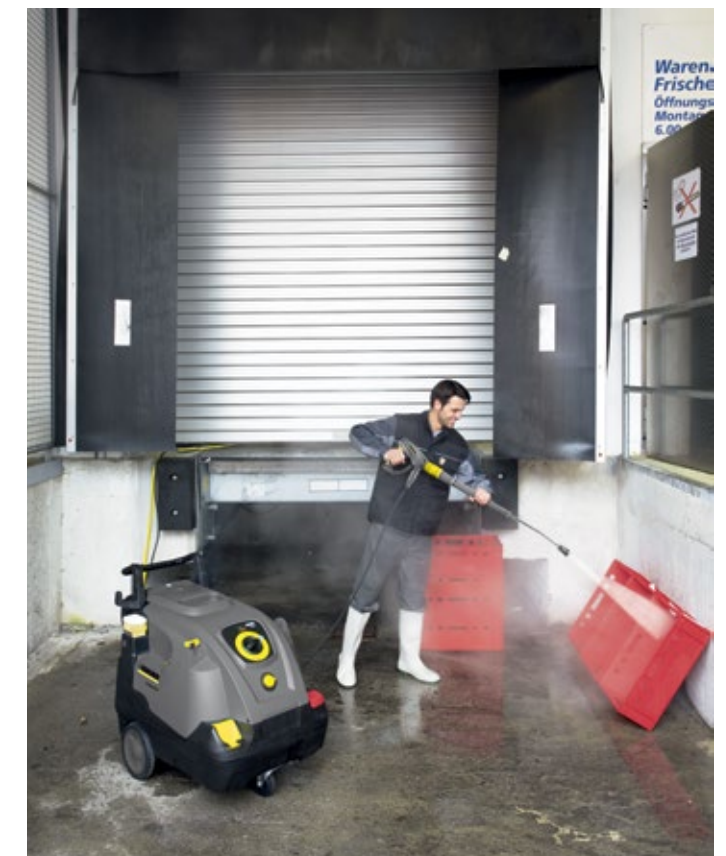

The size of a surface being cleaned always makes a huge difference. If the machines are too small, this wastes time and manpower. Machines that are too large are not economical. The Kärcher System will always give you the right solution, even for the toughest problems. We support you by offering professional consultation for all levels.

We work with you to analyse your needs and create a plan. We put together the right solutions for you, so that you can handle all cleaning tasks properly, economically and sustainably while keeping equipment and investment costs to a minimum.

The logistics field uses mostly powerful and robust machines that remove any dirt, dust or waste stuck to large surfaces. Lorries, ramps and the incoming goods zone are equally challenging to clean. For all these different tasks, you can find the right machine in our broad product portfolio as well as a full range of accessories and cleaning agents.

Loading surfaces and cargo handling areas are subject to stringent hygienic standards in food retail. Wherever hygiene matters, you can rely on special machines like our high-pressure cleaner from the Food-Compact class. In the areas of fresh meat and frozen goods, our SGV steam cleaners ensure maximum hygiene and eliminate 99.999 per cent of all germs.

Large machines such as scrubber driers and sweepers are used in a wide variety of areas. Likewise, there are many different drive choices to consider. Our self-driving machines are driven with electric, diesel or petrol engines or LPG. All options provide you with exemplary ergonomics for drivers and operators, in addition to saving you time and adding efficiency.

SPECIAL SOLUTIONS FOR SPECIAL TASKS

There are no cleaning tasks that can't be performed. There is only equipment that isn't suitable. We have the right machine with matching accessories and ideal cleaning agents for every cleaning task. We have made it our task to develop practical solutions with Kärcher quality even for special cases.

Ensuring green power generation

Contamination from dust, soot and pollen quickly reduces the output of photovoltaic modules by up to 20 per cent. We have developed iSolar for cleaning photovoltaic systems and ensuring their output. This system not only removes all dirt from modules, but also sustainably solves the problem of cleaning such systems. Since the Kärcher System has a modular design, you can usually use iSolar with your existing high-pressure cleaner.

Clean at every turn

Thoroughly cleaning escalators used to be an extremely laborious task. We give you the solution for this which is currently the most effective and economical. By using our escalator cleaner you save a lot of time and get outstanding results. Your customers will like to see that, and operational safety is optimised, too.
