

KÄRCHER

**INNOVATIVE. EFFICIENT.
HIGHLY PRODUCTIVE.**

Scrubber driers for all your applications.
[kaercher.com](https://www.kaercher.com)

PROFESSIONAL | SCRUBBER DRIERS

RANGE OF APPLICATIONS

LOWER COSTS

COMPLETE SERVICE

DRIVING DOWN COSTS

Want to lower costs? Want to save time when cleaning? If you want to achieve this with scrubber driers, then you are in the right place. With our scrubber driers you save on costs and earn more. And your personnel costs will also decrease. And you can use the time gained elsewhere. And save and earn even more.

TECHNOLOGY THAT MAKES SAVINGS

Gain a whole new experience of productivity. Clean better and faster than doing it by hand. Anytime and anywhere with the same, correct parameters: contact pressure, water volume and cleaning agent dosing unit.

Our scrubber driers are very economical in the consumption of water and cleaning agents. And thanks to EASY Operation, every operator achieves optimal cleaning results straight away – without the need for lengthy instruction or extensive training. Operation using pictograms is so simple.

Always perfect cleaning results

Our forward-looking operating concept with KIK and EASY Operation offers ideal safety and protection for operator, machine and the entire working area. The EASY Operation panel makes the right setting easy for you: simply choose one of the cleaning programmes eco!efficiency mode, Scrub and Vacuum, Scrub with water and cleaning agent, Vacuum or Polish. Your scrubber drier is already optimally set for the respective task. You can also specify the maximum water volume and control the driving speed very precisely. The optimal method and cleaning mode according to the application are also displayed.

No chance of operating errors

Colour-coded operating elements display who is authorised to access where. Yellow indicates all elements for the user. Grey elements are only intended for service technicians. Operation can be so simple and so safe.

Clean with just one turn

You can of course clean the tank by hand, but our tank rinsing system is much more comfortable and effective and faster too. You have no contact with the dirty water and don't get wet or dirty.

Fill up the tank with just one turn

Fill up the fresh water automatically. With Auto Fill the water is supplied via a hose and the automatic system is switched off as soon as the tank is full. During this time the operator can perform other activities.

The key to more success: KIK

KIK Kärcher Intelligent Key gives you optimal protection against operating errors. The machine settings are set by the supervisor for the respective task. The operator only has to insert the KIK key, then EASY Operation starts the preset programme.

IT IS THAT EASY

You need the right solution for every cleaning task. With our scrubber driers a range of applications is available which gives you all possibilities. And we help you find the best solution each time.

YOUR EXACT MACHINE

Take the important criteria into consideration when deciding on a machine: the required area performance, the tank volume, the working width, object characteristics and the cleaning frequency. With area performances from approx. 200 to 16,500 m² and different brush heads, our scrubber driers give you all options for the perfect configuration of your ideal scrubber drier.

Your desired configuration

Decide on battery operation or power connector. Then on the appropriate brush head. The available working widths offer all options. Choose the proper suction lips for the respective floor covering. Would you like the tank rinsing system? We generally recommend it.

Home Base Kit

Now you always have the necessary utensils close to hand. You can carry a mop, waste container and many small parts on the machine. Everything is clearly arranged, ready to hand and safely stowed.

Patented, automatic tank interior cleaning

Our scrubber driers have an integrated nozzle system, which automatically cleans the dirty water tank when a water hose is connected and the drain hose is open. An important contribution to HACCP, hygiene and health protection.

Auto Fill filling system

To fill the fresh water tank simply connect a hose with a quick coupling. The water supply stops automatically as soon as the tank is full. Reliable.

Disc brushes

Brush heads with disc engineering are, depending on the type of device, equipped with 2 disc brushes which work in the opposite direction or a single disc brush, all of which can be replaced simply via a pedal. Disc brushes are ideal for smooth, even floors.

Roller brushes

Brush heads with roller technology work at up to 7 times higher contact pressure than disc brushes and achieve a superior scrubbing performance, especially on uneven floors or in joints. The pre-sweep function can save up to 50% of the cleaning time.

OUR SERVICE, YOUR BENEFIT

Perfect service is part and parcel of the perfect machine. We offer you every service you need. With or without contract. For maximum availability, excellent cleaning results and longer service life of the machine.

AS EASY AS POSSIBLE

Many aspects of work life are becoming more and more complex and complicated. In terms of technology, we are able to make many things easier and simpler for you, e.g. with digitalisation. For this purpose, we reduce the number of components wherever possible. And we make the operation of our machines as easy as possible for you. In combination with the KIK system, our EASY control panel creates a simple operating concept to avoid operating errors: you simply choose the right work mode for the application or configure the key for the user with the correct parameters.

Service and maintenance made easy

Our colour coding on the machine also makes daily maintenance easier for you: yellow components represent operation, grey stands for maintenance. With simple access to batteries, brushes and suction lips, you can replace these items in a few minutes without the need for any tools. The recommended maintenance intervals are shown on the display in good time according to defined time units. This way we help you achieve long-lasting and optimal cleaning results with reduced service times. Simple can also be clever.

LEVEL UP

**YOU CAN
ACHIEVE
MORE**

LEVEL

UP

In the cleaning sector, the decisive factor for success is productivity. When you increase your productivity, the direct consequence is that you also improve your operating result.

- **Consulting** You will be amazed at how much more productivity you can achieve with optimised processes. We will advise and show you how you can optimise your cleaning methods and procedures, as well as the deployment of your workers, thus creating productivity potentials. At our worldwide unique cleaning competence centre, we constantly develop new products and methods, and pass on the findings to you.
- **Training** Knowledge and skills are elementary preconditions for professional working with maximum productivity. At the Kärcher Academy, we train cleaning service providers and cleaning representatives and their staff from the user to the sales employee. The topics include all aspects and tasks of cleaning: technology, equipment, application, planning and organisation, digitalisation, invitations to tender and much more.
- **Machines and accessories** Kärcher cleaning machines are the robust, powerful and economical basis for maximum productivity. With our new machines or used machines from Kärcher Used Equipment, and with our complete range of accessories, you are perfectly equipped for all tasks. In addition to building cleaning, our solutions for cleaning service providers also include the outside and green areas, as well as industrial cleaning. Only Kärcher provides this from a single source.
- **Digital transformation** The digital transformation is one of the decisive factors for success in cleaning technology. With our software solution SQ ONE powered by Kärcher, building service providers achieve complete transparency with regard to performance, quality, turnover and costs. SQ ONE is the first digital eco-system for facility management, and ensures lean digital administration with excellent service. Thanks to its open, holistic structure, SQ ONE integrates all those involved in the process chain via apps: administration, service manager, field service, fleet manager, commercial and quality assurance.
- **Cleaning agents and manual tools** Efficiency and productivity in cleaning are inextricably linked with the use of the right detergents, manual equipment and machines. Only cleaning agents, manual devices and machines that are perfectly matched to the customer's needs guarantee optimum cleaning results in the long term. Often times, the productivity in these areas can be significantly increased by implementing the use of coordinated systems.
- **Financing solutions & Rental** Financial services can likewise increase productivity. Leasing provides you with a precise basis for calculations, offers depreciation advantages and leaves scope for other productive investments. With rented machines, you can productively and economically provide a buffer against short-term order peaks. You can perform more services without tying up capital.
- **Service** Service times are unproductive times for your employees. Leave the customer service to our service professionals. You will then get the best service in accordance with factory specifications for your Kärcher machine. As well as for other brands. With our tailored service packages, you benefit from favourable conditions for services and spare parts, as well as optimum availability of your machines. Via the service app, you can request services 24/7 and send photos of damage. In the event of problems, remote diagnosis enables you to obtain rapid assistance from our support staff via video or phone call.
- **Sustainability and environment** For more and more customers, verifiable sustainability and environmental compatibility are a precondition for order placement. For many years, Kärcher has been the driving force for sustainability and environmental protection in cleaning technology. With our programmes eco!zero and eco!efficiency, and thanks to recycling capability, the highest environmental standards in production, active nature and species conservation, as well as our eco!labels, we make our contribution and also make it possible for you to do so too.

HOW TO FIND YOUR MACHINE:

How to read our machine names:

The product name of our scrubber driers shows you the key performance features directly.

Numerical performance specifications:

For scrubber driers, the combination of numbers after the type name indicates the working width in centimetres (1st number) and the volume of the fresh water tank in litres (2nd number after the forward slash). If there is only one number, e.g. B 60 W, this relates to the tank volume. For scrubbers and polishing machines, such as the BDP 50/1500 C, the 1st number corresponds to the working width and the 2nd number is the number of revolutions per minute.

Abbreviations for machine types:

B = Scrubber drier without brush head
 BR = Scrubber drier with roller brush
 BD = Scrubber drier with disc brush
 BRS = Scrubber with roller brush
 BDS = Scrubber with disc brush
 BDP = Polishing machine with disc

Abbreviations for types and configuration:

C = Compact machine without traction drive
 W = Walk-behind machine with drive
 R = Ride-on machine
 RS = Ride-on or step-on machine
 I = Industry machine

Codes for brush heads:

R = Roller head
 D = Disc head
 S = Oscillating cleaning head

Configuration options:

Bp = Battery-operated
 Ep = Power connector (with connection cable)
 Pack = Battery and battery charger included in scope of delivery
 Esc = Suitable for escalators
 Dose = Cleaning agent dosing

¹⁾ Not on alkali-sensitive surfaces (lino, rubber, polished limestone, etc.).

²⁾ For joints and heavily textured coverings.

³⁾ For mineral soiling on acid-resistant coverings (cement film, lime residues, etc.).

⁴⁾ Can only be used with pad discs.

SQ ONE

POWERED BY KÄRCHER

In all major industries, processes are today controlled with software and via digital platforms. Even such processes as are primarily implemented in the physical world. With SQ ONE powered by Kärcher, a digital platform specifically for building services is now available. For the first time, the entire value creation chain will be networked and controllable online.

Employees, machines, materials, services and the end customer: SQ ONE brings them all together on the digital platform. In addition, all Kärcher hardware and software services are compatible with SQ ONE. You can become a company driven by digital technologies now and maintain your optimum performance in the future, too.

BUILDING SERVICE CONTRACTORS

COMMERCIAL CLIENTS

The app suite for building service providers creates a comprehensive operational system. The entire operation is digitally recorded and supported.

The apps for building services – all services available at all times at a single location, simple, convenient and transparent.

SM Service Manager

The interactive portfolio of customers and buildings. The entire planning and control of employees, subcontractors, suppliers, materials and machines at a single location. In addition, G&V management and KPI reporting.

C Commercial

Order, status, communication, invoicing and service in one application. Structured and paperless – available 24/7.

A Administration

The integrated back office – at all times linked with the operational business, from contract preparation, via the supply cycle, disposition and logistics, to invoicing – consistent data available in real time.

QA Quality Assurance

Monitor ongoing quality at any time, even on the go, and intervene directly and actively where necessary – be aware of incidents immediately, wherever they occur. Commission additional services when necessary – in real time, no matter where you are.

FS Field Service

For the executive forces on location – a dynamic and reactive job planner with a day and task manager. A digital room plan with performance specifications, real-time communication, performance, time and quality recording. The whole service in your pocket.

FL Fleet Manager

The entire vehicle fleet in an app. Digital administration and control of location, disposition, performance data, dynamic maintenance cycles, services and logistics. In addition, real-time asset management and continuous stocktaking.

Web apps:
Chrome / Firefox / Safari

THE RIGHT SOLUTION FOR EVERY JOB

By professionals for professionals: as a global market leader, Kärcher offers you a diverse range of top-class services, as well as innovative and customised solutions for your requirements. We are happy to help. Every time you need our support.

services

All angles covered: With our efficient solutions we help you achieve something great and become even better. Anywhere and anytime.

consulting services

Increased productivity means better quality:

We optimise your cleaning processes and are happy to advise you with an individual and sustainable cleaning concept.

service

At Kärcher you can take customer proximity literally: We provide expert help in the event of major faults or application problems – worldwide and at any time.

all brands service

Competent, reliable and fast: for all machines. Use our Kärcher All Brands Service for the repair and maintenance of machines from other manufacturers.

service packages

Regular, professional maintenance reduces the risk of breakdown for your machine fleet, extends the service life of your machines and increases their current market value.

rental

Rent directly from the manufacturer: With our rental machines you use the machine best suited for your application. And only for exactly as long as you really need it.

used

Kärcher is Kärcher: All machines, whether second-hand, leasing returns or demo equipment, are checked and conditioned in the used machine centre.

financial solutions

Tailored financing: In cooperation with well-known leasing partners we offer a variety of individual financing solutions.

original spare parts

Strong in all parts: Our spare parts represent value preservation and the usual strong cleaning performance at the Kärcher standard.

pay per use

Flexible, usage-based and low risk: With our pay-per-use models we offer our machines not only for sale, but also as a service.

MEHR INFOS

Our support for your success: we are your reliable partner when it comes to cleaning.

More information about our top services can be found at [kaercher.com](https://www.kaercher.com)

SUSTAINABILITY IS MORE THAN ENVIRONMENTAL PROTECTION

eco!efficiency

BLUECOMPETENCE

Alliance Member

Partner of the Engineering Industry Sustainability Initiative

Less is more. And less can do more

The primary aim of Kärcher eco!efficiency is to reduce the consumption of resources and energy with a cleaning performance that is tailored to specific applications. In order to calculate the possible savings in energy and CO₂ emissions over the service life of the machine and render them comparable, these were calculated based on the example of our T 12/1 and T 12/1 eco!efficiency dry vacuum cleaners. TÜV SÜD Industrie Service GmbH verified and confirmed the plausibility of the methodology for calculating greenhouse gas emissions in the utilisation phase of the T 12/1 eco!efficiency against benchmarks. Based on this methodology, Kärcher calculated that all T 12/1 eco!efficiency dry vacuum cleaners sold to date

will save around 6,000 tonnes of CO₂ emissions throughout their service life. All Kärcher eco!efficiency machines in total will save about 2.5 million tonnes of CO₂ emissions.

Work towards a better world: BlueCompetence

Blue is the colour of sustainability, which takes into account cost-efficiency, environment and society. Roughly 400 companies and organisations are involved in the “BlueCompetence” initiative launched by the German Engineering Federation (VDMA) and they all share a common goal: to improve the quality of life on our planet over the long term.

Sustainability means conducting business fairly, with a sense of responsibility towards people and the environment. Kärcher anchored sustainability as a corporate objective and has been practising it for decades: sound finances and satisfactory profits, achieved by dealing fairly with people and using resources responsibly.

Do more with less energy

The saving on CO₂ emissions of all machines equates to roughly 1.5 million flights from London to New York*. These figures clearly demonstrate how much energy and emissions can be saved by using Kärcher eco!efficiency cleaning appliances. When it comes to climate protection, less is always more – and achieves more.

Climate-neutral cleaning

We cannot produce anything without emissions. But we can completely offset greenhouse gas (CO₂) emissions in order to neutralise their effects on the environment. And you can also do this for your industry.

*1.7 tonnes of CO₂ per flight.

For a small surcharge, you can offset the CO₂ emissions of your Kärcher cleaning machines so that they are climate-neutral over their entire operating life.

These contributions, yours and ours, are fully incorporated into a certified climate protection project of ClimatePartner: for example, “Water treatment in West Kenya” gives millions of people access to clean drinking water. The use of filter systems for water treatment saves 2.1 million tonnes of CO₂ emissions from firewood each year. At the same time, sustainable jobs for several thousand people are created. A project that is useful for everyone, completely transparent and accountable. Your sales advisor can explain how you can benefit from climate-neutral cleaning.
