MORE HYGIENE ON FLOORS

Spray a little to achieve a lot. [kaercher.com](https://www.kaercher.com)

PROFESSIONAL | SPRAY SANITATION

WHEN CLEANING ALONE IS NOT ENOUGH

The new normal for everyday hygiene:
germ reduction.

In principle, it is sufficient to clean surfaces that are not subjected to hand or skin contact on a routine basis, for example floors. However, depending on the environment and situation, it may be useful to reduce the number of germs and to prevent germ enrichment. This is what we mean by sanitation.

With our spray sanitation kit for scrubber driers, you can very effectively reduce the number of germs on floor surfaces, as well as on vertical

surfaces and furniture. This is done with existing machines in addition to their normal cleaning function. With minimum expenditure and materials.

Subject to the applicable guidelines, our attachment kit can even be used for professional spray disinfection. Other options for disinfection with scrubber driers can be found in our flyer **Disinfection with scrubber driers**.

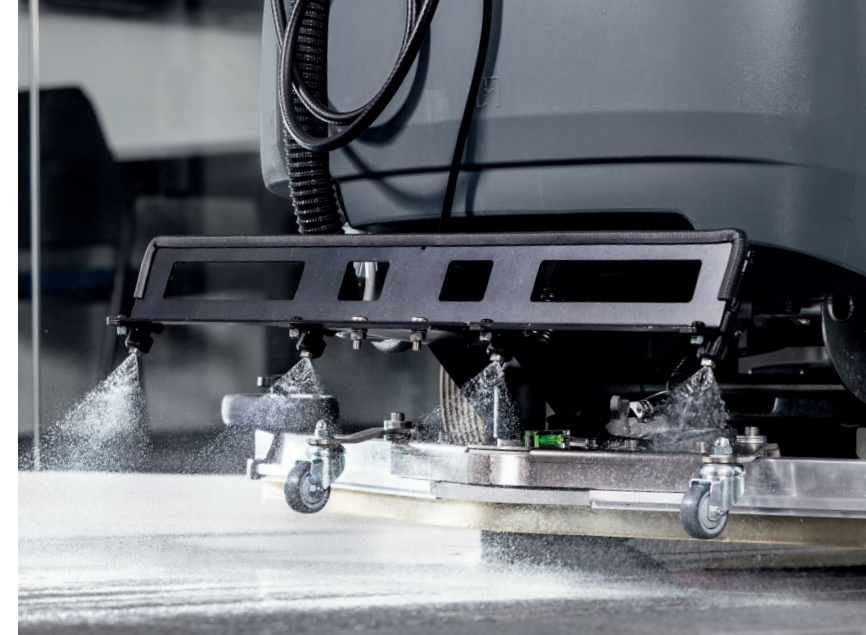

SPRAY SANITATION: INGENIOUSLY SIMPLE

Simply fit our spray sanitation kit to the squeegee. And you're ready to go!

The spray sanitation kit is currently available for our B 150 R and B 200 R scrubber driers and can be retrofitted at any time. This extends the functional scope of the machine, while previous functions are retained. They can either just clean, just spray, or do both at the same time. Simply pour a suitable disinfectant solution into the fresh water tank.

The spray bar spreads the disinfectant solution very finely over the entire working width and thus ensures sufficient moistening for sanitation.

By means of the acting and drying time, the disinfectant solution results in a significant reduction in the number of germs on the surface.

TAKE GREAT CARE

- For the disinfection solution, a suitable spray disinfectant cleaner must always be used, for example our RM 735.
- Please pay close attention to the manufacturer's specifications and the regulations applicable in your country.
- For effective sanitation, you need to maintain and clean the machine before and after use every time it is used.

SO VERSATILE: THE HAND NOZZLE

With the hand nozzle in the attachment kit, you now have germs under control everywhere.

You can simply switch from spray bar to hand nozzle directly during operation. Your scrubber drier is then available to you as a fast mobile unit with a large tank full of disinfectant solution. And is therefore the ideal machine for the sanitation of individual objects and surfaces in spacious areas.

In addition to floors, with our spray sanitation kit you can also ensure the efficient sanitation of objects such as waste bins, door handles, handrails, benches, vending machines etc. Or use the hand nozzle for the sanitation of incoming goods on pallets, as well as handheld devices.

SIMPLY TAKE HYGIENE INTO YOUR OWN HANDS

- Use the hand nozzle for sanitation in public buildings such as railway stations or airports, in office blocks and industrial buildings, in old people's and care homes, kindergartens and schools, in swimming pools and sports facilities.
- Clean and sanitise the areas above the floor and objects of all kinds, from door handles to cash dispensers.
- During operation, simply switch the spray bar to hand nozzle as required – and vice versa.

A man wearing a black cap, safety glasses, a black jacket over a grey shirt, and black gloves is holding a spray nozzle connected to a large grey machine. He is spraying a fine mist of liquid. The background shows a stone wall and greenery.

ALL THE BENEFITS FOR YOU

OUR SPRAY SANITATION KIT IN OVERVIEW:

- Retrofittable: very low investment. You need not purchase any machines.
- Retrofitted machines can be used for both cleaning and sanitation. No additional machines are necessary.
- Cleaning or sanitation with one machine. The efficient and economical solution for increasing hygiene levels.
- Also suitable for the sanitation of vertical surfaces and furniture. You need not purchase any additional machines.
- Incorporated in the perfectly coordinated Kärcher system: machines, accessories, services, connected cleaning, manual cleaning, cleaning and care products, and industrial solutions.

RETROFIT FOR THE FUTURE

Doing a little more than is absolutely necessary is reasonable when it comes to hygiene. And with the spray sanitation kit, it's also very easy.

Technical data

Spray width on the floor	1,200 - 1,300 mm
Flow rate, spray bar	1.2 l/min
Flow rate, hand nozzle	0.5 l/min
Surface moistening at 5 km/h	12 ml/m ²
Order no.	2.644-235.0

The spray sanitation kit with hand nozzle is easy to retrofit.
