## CLEANLINESS & HYGIENE IN RESTAURANT

Cleaning solutions for carpeted restaurants

PROFESSIONAL | RECA

# **HYIENGE & EFFECTIVE CARPET CLEANING**

**Sustainable hygiene management is now a standard practice in the restaurant business. It improves the wellbeing of guests and reflects the self-image of the business. In addition, professional maintenance extends the service life of the facilities. Cost-conscious managers invest in Kärcher cleaning systems because they are economical in use, intuitive in operation and extraordinarily long-lasting.**

## COMMON DIRT FOUND IN RESTAURANT CARPETS

### Food & drink spillage

Food and drink spillage by customer or waiter is very common especially during restaurant peak business time. If the spillage or dirt is not treated immediately, it will leave a stain or breeding bacteria's and fungus, or worse situation the spillage might spread wider by customer stepping on it.

Using just a normal vacuum and cloth wipe would not solve the problem as the cleaning only cleans the surface of the carpet. Therefore even after cleaning crumbs of food still can be found deep in the carpet, which could invite ants.

### Dirt brought by customer

It is also very common during rainy season, guest might bring in dirt and wet shoes from outside to the restaurant. Many restaurant owner might not know that the dirt bring in might damage the carpet in the long run if not clean up. Also the wet carpet areas if not clean in over time it brings unpleasant smells, or worse it breeds bacteria's and fungus. It is difficult to clean an wet carpet let alone to dry it, cause the carpet is stationary and cannot move outdoor to be dry in the sun.

# CLEANING IS A NEVER-ENDING TASK.

The entrance and dining area are the most heavily frequented areas of a restaurant and require a high level of attention for cleaning. Furniture often makes it difficult to reach corners or angles. Thorough cleaning after closing time can therefore be quite a task. A task that you will master easily with our machines, which are specially adapted to these conditions. And your guests will love it!

## Daily Maintenance cleaning

1

### Vacuum Regularly.

Helping to achieve the desired level of cleanliness and thereby ensuring that guests and employees feel happy and at ease. It is also a necessity that avoids permanent damage being caused by dirt being left to stick onto surfaces, meaning it lengthens their service life quite considerably. Aim to vacuum once or twice a week and increase the frequency in high-traffic or pet areas.

### Treat Stains ASAP.

The longer stain sets in, the harder it is to remove. With Karcher Universal Stain Remover D-RM769, all oil, tar, shoe polish, adhesive, etc stain on all textile coverings, upholstery and hard surfaces can be effectively removed.

# 3 SIMPLE WAYS TO KEEP YOUR CARPETS CLEAN.

## Intermediate Cleaning

2

### Carpet Cleaning & Refreshing.

Helping to achieve a sustained cleaning and refreshing of carpet floors. This is to reduce the frequency of deep cleaning on carpet which is both time-consuming and thus costly, and also to maintain a high standard of cleanliness. Aim to clean twice a month and increase the frequency in high-traffic or pet areas.

## Basic Carpet Cleaning

3

### Thorough Carpet Cleaning.

Effectively remove stains and stop unpleasant odors. Maintaining a hygiene and clean carpet to lengthens the carpet service life quite considerably. Aim to clean once six month and increase the frequency in high-traffic or pet areas.

# DAILY CLEANING

## 1 Upright Carpet Vacuum

Upright brush-type vacuum cleaners have proven to be especially effective at cleaning textile floor coverings and carpets on a daily basis. The carpet brush in the suction head is powered by a separate motor. It reaches right down into the base of the pile, driving the loosened dirt towards the suction channel and straightening the pile out at the same time. This avoids any damage being caused to the floor covering.

## 2 Stain Remover

Stains caused by coffee, tea, red wine or tar also have to be immediately removed using a stain remover in order to give an overall impression of cleanliness. Universal Stain Remover RM 769 is ideal for this, with the option of applying it to any textile floor coverings and upholstery.

# INTERMEDIATE CLEANING

## 3 1<sup>st</sup> SPRAY CLEANING AGENT

## 3 2<sup>nd</sup> VACUUM UP DIRT

## 3 iCapsol method

### First Step

The iCapsol method is perfect for the intermediate cleaning of textile floor coverings. Machines with roller technology are used with the addition of the special iCapsol cleaning agent to encapsulate the dirt on the fibers. For this to work, a thin layer of the cleaning agent has to be sprayed on the floor before the area is treated with a contra-rotating roller machine. The floor covering only gets a slightly damp in the process, meaning that it is soon ready to walk on again. The cleaning agent encapsulates any dirt loosened.

### Second Step

The loosened dirt is then vacuumed and removed by the roller brushes at ease using an upright brush-type vacuum cleaner after a drying time of at least 30 minutes. This method does not leave behind any cleaning agent residue, meaning that the carpet is less likely to get dirty again.

# BASIC CLEANING

## 4 Deep Cleaning Method

### First Step

A carpet cleaner machine is used for fiber-deep cleaning of textile floor coverings. In order to restore the design and color to their original condition, the selected cleaning agent is worked into the floor covering using a carpet brush and applying spray pressure. The loosened dirt is sucked back up again as part of the same process. The next step is to rinse the floor covering with clean water.

### Second Step

Use an upright brush-type vacuum cleaner for a thorough clean once it has fully dried (at least eight hours). It is important that nobody walks on the floor whilst it is drying. As a general rule, it makes sense to apply a fiber-protecting agent to textile floor coverings and surfaces. There is two method.

# EFFECTIVE CLEANING DETERGENT

## 7 iCapsol technology

The patented iCapsol technology can be used not only for intermediate cleaning of carpets, but also for deep cleaning. This is unique worldwide. iCapsol active ingredients bind the dirt and surfactants after cleaning to prevent resoling of the carpet fibers. iCapsol active ingredients form a crystalline structure when dry. These crystals are simply vacuumed during the next maintenance cleaning. This results in time savings of up to 50% even when deep cleaning, as there is no need to rinse and the drying time is shorter. The advantages are noticeable even without previous rinsing, because resoling is delayed and carpets stay cleaner longer.

7

8

## 8 Integrated odor absorber

An integrated odor absorber cuts the time needed for intermediate and deep cleaning of textile surfaces. Carpets and upholstery are not only left clean, but also smell clean.

### INTERMEDIATE CLEANING

CAPACITY

**10 liter**

Encapsulation technology: Dirt is encapsulated for vacuumed
