In the lab comparison the K 5 pressure washer* from Kärcher demonstrated the widest and thus most efficient cleaning jet compared with four competitor products from well-known manufacturers. Our devices were compared with competitor products with identical or higher maximum pressure ratings.

* Representative selection for other devices in the K 5 performance class: K 5 Premium Smart Control and K 5 Premium Power Control

The test institute uses for the laboratory test dyed panels which are blasted with the rotary nozzle. Then the efficiency of the cleaning jet is determined based on the width of the cleaning track. The illustration on the left shows the result of the tested Kärcher device compared to the results of the competitor devices.
