

MOST EFFICIENT CLEANING JET

Confirmed in lab comparison by independent institute.

In the lab comparison the K 7 pressure washer* from Kärcher demonstrated the widest and thus most efficient cleaning jet compared with four competitor products from well-known manufacturers. Our devices were compared with competitor products with identical or higher maximum pressure ratings.

* Representative selection for other devices in the K 7 performance class: K 7 Smart Control and K 7 Power Control

The test institute uses for the laboratory test dyed panels which are blasted with the rotary nozzle. Then the efficiency of the cleaning jet is determined based on the width of the cleaning track. The illustration on the left is an example of a tested Kärcher device compared to the results of competitor devices.
