**IT'S CLEAR
TO SEE:
CLEANLINESS
BRINGS SUCCESS**

TOP QUALITY FROM THE NET TO THE SHELF

What's the recipe for success in the aquaculture sector? Your expertise combined with our Kärcher professional equipment for perfect cleanliness. Our cost-effective cleaning solutions ensure hygiene is maintained at every stage of production – which, in turn, ensures excellent fish.

01 Hatchery

It takes the very cleanest conditions to produce fish eggs and shellfish eggs. Our high-pressure cleaners and accessories are ideal for cleaning small pools and tanks. Steam cleaners remove the need for cleaning agents and are highly effective for hygienic results.

02 Breeding stock

Keeping valuable breeding stock safe requires tanks, rooms and equipment to be 100 per cent clean. Our hot water high-pressure cleaners break down biofilms, clean floors and prepare facilities for disinfection: as a hygiene measure for the next generation of breeding stock.

03 Rearing

Our mobile or stationary high-pressure cleaners, scrubber dryers and specially formulated cleaning agents ensure tanks and pools are spotlessly clean. The cleaning facilitates a high level of hygiene, thus ensuring the vulnerable little fish are safely reared to the size of healthy fingerlings.

04 Juvenile fish

Higher stock levels and longer holding periods means the facilities for fingerlings and smolts get very dirty. Our stationary or mobile high-pressure cleaners, wet and dry vacuum cleaners, scrubber dryers and cleaning agents create hygienic husbandry conditions.

05 Transport

Transport from the breeding tanks into other tanks, cages, ponds or into final production facilities needs to be impeccably clean. This is where high-pressure cleaners and multi-functional wet and dry vacuum cleaners are instrumental in breaking the chains of infection to ensure 100 per cent hygienic conditions.

06 Cages

Once the mature fish have been transported elsewhere, grow-out tanks, ponds and cages are reliably rid of any dirt using high-pressure cleaners and the right combination of accessories. Mobile high-pressure cleaners with petrol/diesel motors or batteries are ideal for use without a power supply.

OPTIMUM RESULTS EVERY TIME

From the hatchery all the way to the shelf, hygiene and breaking the chain of infection are the number one priority. Kärcher systems are your all-rounders for accurate dirt removal: for clean equipment, first-class fish and profitable production.

CONTAMINATION- TION OUT, HYGIENE IN!

Almost all impurities get into your aquaculture through the air or on the bottom of shoes. Cleaning systems from Kärcher provide efficient ways of keeping floors clean, keeping contamination at bay and protecting your fish from infection.

HYGIENE WITH HIGH PRESSURE: SO SIMPLE, EFFECTIVE AND ECONOMICAL

Aquacultures need faultless hygiene. Because infections can kill hundreds of thousands of your fish in one fell swoop – and your profit too! With Kärcher high-pressure cleaners, you can guarantee impeccable facilities and commercial success.

Fighting dirt with foam

Applying cleaning agents in the form of foam significantly extends the contact time, loosens the dirt effectively and makes it easy to see where cleaning agent has been applied. So there are plenty of good reasons to use our cup foam lance, because it allows you to clean everything efficiently, saving time, cleaning agent and money.

Quick and powerful cleaning

Clean facilities are your goal. With our high-pressure cleaners, you can let the machine do all the hard work with highly effective results, saving you time and a lot of water too. Hot water dissolves proteins and fats more effectively, clears heavy coatings and significantly reduces bacteria levels. Cold water with added cleaning agent can often serve as an effective alternative.

Cleaning inside pipes

Films of bacteria grow and migrate inside pipes and must therefore be regularly removed. With our pipe-cleaning sets for high-pressure cleaners, you have all the right nozzles and hoses to hand – so even the insides of pipes can be easily and effectively cleaned to a high hygiene standard.

EVEN FISH LIKE TO HAVE CLEAN FLOORS

Clean floors guarantee a healthy environment for your fish – and the best-possible production conditions for you. The solution: Kärcher systems to clean your facilities in the most effective, biosafe and efficient way possible.

Agile scrubber dryers

With our scrubber dryers and cleaning agents, you can use mechanical and chemical power to clean floors effectively. Simply apply the cleaning solution, work it in mechanically with the brushes and then vacuum up the dirty water for a dry floor.

Flexible wet and dry vacuum cleaners

Our multifunctional vacuum cleaners work on wet and dry dirt alike, making them the ideal tool for diverse cleaning applications and dirt problems. A time-saving and reliable method of cleaning up liquid deposits as well as dry, dusty material.

Gentle steam cleaners

If the use of cleaning agents is not possible, hot steam from steam cleaners is the agent of choice. Gently clean horizontal or vertical surfaces with floor nozzles or steam brushes and dramatically reduce bacteria levels without the use of any chemicals.

Effective surface cleaners

To effectively clean large, horizontal floor areas, the high-pressure cleaner combined with a surface cleaner is the ideal choice. The dirt is cleaned off without any splash water and is washed away with the water. For delicate surfaces, suction is also available.
